

ACRECIO ROOT ACTIVATOR

The New Generation of Biostimulants.

New opportunities arise when you are prepared. A lettuce grower participating in a field trial for **ACRECIO** learned firsthand that real money is at stake if you have the quality marketers want, when they need it.

ACRECIO was shanked in pre-plant at 1.25 gal/acre and side-dressed after thinning at 1.25 gal/acre. The grower had this whole crop contracted for processing. A 3-day window became available for a fresh market contract, which pays better, so they assessed the fields (see Head Weight data below).

Acrecio treated lettuce would be ready in time for harvest the next week, the control lettuce was too small. At harvest, treated acres averaged 38 pounds per 24-count box.

*Measured on same day:
1 week prior to Acrecio harvest,
2 weeks prior to grower standard harvest

ACRECIO: 4 Effects for root growth

- 1 Biostimulant
>Humic acids
- 2 Amplify the production of auxin
>Pure L-Tryptophan
- 3 Amplify the production of ethylene
>Pure L-Methionine
- 4 Action on root elongation
>ACRECIATIV

The **ACRECIO** treated acres were harvested **earlier** for a premium price, *and* showed an increase in yield and quality over the grower standard.

This grower also wanted to replace his \$200/acre biostimulant product, to increase profitability. The grower's standard earned \$12,984 /acre. The **ACRECIO** input cost him about **\$90/acre** but earned him **\$14,821 /acre**. That is a net return of **\$1,747 MORE per acre**.

ACRECIO is designed to help plants resist environmental stresses, stimulate the soil's microorganisms making nutrients more available, and our proprietary ingredient **ACRECIATIV** amplifies the natural action of ethylene and auxin on root development.

Would you like to make more money per acre, and get to market sooner?

Try **ACRECIO** and Grow With Us!

Always read and follow label. For more trial information, contact us: info@techflo.com
